PART # BB-21

BUELL BLAST SMOKE THE COMPETITION!

This kit consists of 5 friction, 5 steel plates and a 15% stronger than stock diaphragm spring. Plates should be pre-soaked in the same fluid you will be using in the bike for about 10-15 minutes. The type of fluids we recommend are any HD petroleum based, non-synthetic, primary oil, as light weight as possible, or even a good petroleum based motor oil such as 10/40 or 20/50 in weight. You can even use ATF Type F or B&M Trickshift. **THE USE OF SYNTHETICS IS NOT RECOMMENDED AS THEY TEND TO CAUSE SLIPPAGE.**

Start with a friction plate and end with a steel plate. You must use all pieces of this kit. Do not mix old plates with the new plates.

These are just some helpful hints. For further technical assistance, always *refer to your owners manual*. Feel free to give us a call (562) 698-7809.

For a free catalog, please complete the attached post-card and return to us or fax request to 562-698-6922.
